PROFESSIONAL SUMMARY

Software Engineer focused on business-impact-driven development. As a Product Engineer, I not only optimize modern architectures (Next.js, Supabase) but design solutions that accelerate production cycles, reduce operating costs, and improve conversion. I have solid experience collaborating in dynamic environments under agile methodologies, ensuring continuous integration (CI/CD) pipelines and clean, typed, and extensively documented code for team success.

PROFESSIONAL EXPERIENCE

Product Engineer & Full-Stack Developer (Independent)

2023 - Present

INDEPENDENT CONSULTING

Designed and orchestrated the complete architecture of a premium automotive platform (Superautos Code), integrating complex features such as WebSockets-based real-time chat (Supabase), interactive maps, and dynamic catalogs. Implemented strict runtime safety mechanisms on dynamic data visualization components for vacation rental applications (Caribe Stay). Automated inventory and order management for the Pottery Shop, eliminating operational bottlenecks via highly available serverless workflows.

KEY PROJECTS

Superautos Code

Designed and coordinated the complete architecture of this full-stack platform, focused on optimizing automotive sales flows in production.

Impact: Real-time chat and dynamic catalog integration reduced customer response times by 45%, directly boosting lead conversion rates. Project structured under Git Flow and extensive documentation for multidisciplinary scalability.

Caribe Stay

Dynamic vacation rental booking system with runtime security mechanisms and checkout flows optimized for conversion.

Impact: By optimizing critical checkout flows and achieving Core Web Vitals of 95+, booking cart abandonment was reduced by 30%, transforming the technical infrastructure into a highly efficient and reliable production channel for the business.

Pottery Shop [↗](#)

Modular e-commerce solution that automated inventory management and order processing, eliminating operational bottlenecks.

Impact: The platform eliminated operational bottlenecks, reducing manual order administration time by 60% and ensuring a highly available serverless environment capable of absorbing commercial traffic spikes without loss of billing.

Online Store [↗](#)

E-commerce platform that automated the entire sales cycle: dynamic catalog, real-time inventory, and integrated payment gateway.

Impact: Complete automation of the sales flow with a dynamic catalog, inventory updated in real time, and an integrated gateway, optimized for conversion and production performance.

Pizzería La Focaccia [↗](#)

High-end e-commerce for the gastronomy sector.

Impact: Implementation of a reactive state management system and immersive animations, resulting in an intuitive and high-performance interface.

Blog Vision [↗](#)

Modern blog platform with a focus on fluid reading, typography optimization, and exceptional performance.

Impact: Successful implementation of an ultra-fast blog using advanced static rendering techniques, SEO optimization, and fluid transition animations.

Startup App [↗](#)

Modern SaaS platform oriented to the launch, validation, and agile management of new business ideas.

Impact: Construction of a high-performance adaptive SPA with optimized registration flows, smooth transitions, and a reusable modular architecture.

Legacy Portfolio [↗](#)

First iteration of the personal brand ecosystem.

Impact: Minimalist design that served as the basis for the evolution towards more complex web architectures.
